CITY COUNCIL

Salisbury Charter Market Adverse Weather Policy

(March 2023)

Doc 90079

Process to be followed in the event of adverse weather at Salisbury Charter Market

This document details the process that will be followed in order to provide a safe environment for the operation of the market, the traders and for those who utilise the area.

Wind speed and gusts

We know that most professional gazebos will tolerate wind speed gusts of up to 40mph, for gazebos known as garden type gazebos the manufacture advice is they cannot be used in wind speeds of 27mph or more. Market type metal structures, those that you build using the square type metal frame bars, can tolerate a more substantial wind gusts, however Salisbury City Council will not allow any gazebos or structures to be erected in wind speed gust of 41mph or greater. Flat trading will then be allowed.

The day prior to a market the Market Officer will check the weather forecast via the Met Office. If wind gust forecasts are predicted to exceed 26mph for any period during the next trading day (including erection/dismantling hours) the following process will be invoked.

For wind gusts between 26mph and 35mph

Only Profession Grade Gazebos or Structures will be allowed

- Erecting/dismantling to take place under normal operating safe system of work (at least two persons to each stall)
- Adequate weights, or similar, must be used to secure your gazebo/structure
- Trader vehicles will be allowed on site to act as a wind buffer

For wind gusts between 36mph and 40mph

- If wind gusts are predicted to be between 36mph and 40mph during set up/take down times this will be communicated to traders. The gazebos will

be required to be cable tied to the vehicles, post, bollards or together to provide greater strength.

- Trader vehicles will be allowed on site to act as a wind buffer

Advice

- For a 6m x 3m unit, three weights should be placed on the four corners and one weight on the centre legs (if present) where wind gusts of 36mph to 40mph are predicted. The same applies for 3m and 4.5m units. Where possible (Covid-19 Restrictions allowable) then gazebos should ideally be cable tied together which will offer greater strength in wind conditions
- Weights should be placed on the stall legs immediately after the stalls are expanded out, then legs should be raised
- During dismantling weights should remain in place while the legs are lowered
- Canopies are left untied when erecting/dismantling

For wind gusts in excess of 41 mph

- No stalls will be erected
- Traders will be notified if it is safe to trade from their vehicles or direct from the square floor only. For the fruit and vegetable traders authorisation may be given to use their own tables due to the weight of the goods (flat trading)
- The Markets Team will release communications via email and the Salisbury City Council Facebook pages.

A dynamic assessment will be made on the morning of the market day, if the wind speed gusts for your type of gazebo or structure are assessed as dangerous then you will not be allowed to trade from your gazebo or structure.

During the Market set up/take down

The Market Officer or other council officer will carry out a dynamic risk assessment during erecting/dismantling. Should they have reason to believe that the prevailing weather conditions (generally in excess of 35mph) are likely to pose a risk to traders or any members of the public, these operations will be stopped. A decision will then be made as to the way forward.

During the market day

If the wind gusts appear to pick up, the Market Officer will monitor the wind speed gusts (using a wind monitor) throughout the day and have the discretion to close the market should weather conditions worsen. Traders must comply with this decision.

Heavy snowfall

- The Market Square main footways are cleared of snow where appropriate to do so
- The Market Officer can cancel the market if the site is deemed unsafe
- The Market Officer will monitor throughout the day and request further clearance if necessary
- In the event of heavy snowfall during market operations the Market Officer can make the decision to close the market early
- This operation will be carried out when it is deemed safe to do so following a dynamic risk assessment

Extreme heat

The Market Officer should ensure that any trader selling regulation food is able to comply with Environmental Health guidelines for its storage.

It is the responsibility of the trader to establish if the market is open. To check on trading limitations, contact the Market Manager.
